RAYVON GREGORY
J A V A S C R I P T   D E V E L O P E R

INTRODUCTION

I am a former math teacher and self-taught developer with three years of experience writing code in various languages. As a teacher, I loved having the opportunity to give back to my hometown of Bloomfield, CT, and sharing my knowledge with so many gifted students. However, after two years in that position, I realized I was no longer being challenged and decided to develop a new set of skills in preparation for a career change. I created three projects in 2021; each one challenging me in new ways and sharpening my skills. I am confident I have prepared myself well and have the tools necessary to be successful as a full-stack developer.

PROJECTS

Math Camp
[Demo](#) [Git Repo](#)
This is my first full-stack project and it was inspired by my previous career. I built the app I wish I had when I was a teacher.
Technology used: HTML(EJS), CSS, JavaScript, Node.js, Express.js, MongoDB

War
[Demo](#) [Git Repo](#)
This was my first React project. It started out as a basic HTML, CSS, and JavaScript app but I later decided to convert it to a React app due to the challenges I was having with keeping my code organized.
Technology used: HTML, CSS, React.js

Cocktail Finder
[Demo](#) [Git Repo](#)
This app uses data from the free CocktailDB API and returns the ingredients and instructions to make all sorts of different cocktails. It's a really simply app but it's just what I needed to get over my irrational fear of fetching data from APIs.
Technology used: HTML, CSS, JavaScript

EDUCATION

Self-taught
2020 – present

University of North Carolina
2014 – 2018

RELEVANT SKILLS

- Proficient in HTML, CSS, and JavaScript
- Proficient in Node.js and using MongoDB
- Proficient in responsive design
- Comfortable using React.js
- Familiar with Java, Python, and SQL
