Projects

Math Camp (Demo)
Technology used: HTML(EJS), CSS, Vanilla JavaScript, Node.js, Express.js, MongoDB

This is my first full-stack project and it was inspired by my previous career. I built the app I wish I had when I was a teacher.

War (Demo | Git Repo)
Technology used: HTML, CSS, React.js

This was my first solo project. It started out as a regular HTML, CSS, and Vanilla JavaScript app but I later decided to convert it to a React app due to the challenges I was having with keeping my code organized.

Cocktail Finder (Demo | Git Repo)
This app uses data from the free CocktailDB API and returns the ingredients and instructions to make all sorts of different cocktails. It's a really simply app but it's just what I needed to get over my irrational fear of fetching data from APIs. Turns out they're nothing to be afraid of.

Portfolio Page (GitHub Page)
All of the projects I have listed above are also posted on my GitHub page.

Education

2020 – Present
Self-taught in Web Development

2014 – 2018
University of North Carolina

Skills

- Proficient in HTML, CSS, and JavaScript
- Proficient in responsive design
- Proficient in Node.js and MongoDB/Mongoose
- Comfortable using React.js
- Familiar with Python and SQL
